3.8 - States with Utility Green Pricing Programs

Green pricing is an optional utility service that allows customers an opportunity to support a greater level of utility company investment in renewable energy technologies. Participating customers pay a premium on their electric bill to cover the extra cost of the renewable energy. Many utilities are offering green pricing to build customer loyalty, as well as expand business lines and expertise prior to electric market competition. To date, more than 500 investorowned, municipal, and cooperative utilities in 34 states have either implemented or announced plans to offer a green pricing option.
